It examines new approaches, addresses growing concerns about hydrological and ecological connectivity, and considers the worldwide impact of climate change. It also provides updated material on hydrological science and engineering, discussing recent developments as well as classic approaches. Published in three books, Fundamentals and Applications; Modeling, Climate Change, and Variability; and Environmental Hydrology and Water Management, the entire set consists of 87 chapters, and contains 29 chapters in each book. The chapters in this book contain information on: Long-term generation of scheduling of hydro plants, check dam selection procedures in rainwater harvesting, and stochastic reservoir analysis. Ecohydrology for engineering harmony in the changing world, concepts, and plant water use. Conjunctive use of groundwater and surface water. Hydrologic and hydraulic design in green infrastructure. Data processing in hydrology, optimum hydrometric site selection and quality control, and homogenization of climatological series. Cold region hydrology, evapotranspiration, and water consumption. Modern flood prediction and warning systems, and satellite-based systems for flood monitoring and warning.
